EDUCATION

Harcourt Butler Technical University

Bachelor of Technology in Information Technology, CGPA: 7.8/10

Kanpur

2024 – Present

Government Polytechnic Kanpur

Diploma in Electronics Engineering, Percentage: 78%

Kanpur

2021 – 2024

EXPERIENCE

UPPTCL

Intern

Aug 2024 – Sep 2024

Kanpur

- Studied power transmission systems and substation operations.
- Learned industrial monitoring, fault detection and electrical instrumentation.
- Observed automation workflows used in high-voltage power transmission.

PROJECTS

Sales Forecasting System | *Python, Scikit-learn, XGBoost, Streamlit*

- Built an end-to-end machine learning pipeline for forecasting future sales using historical business data.
- Performed data preprocessing, feature engineering and exploratory data analysis (EDA).
- Compared multiple regression algorithms and selected the best-performing model.
- Developed an interactive Streamlit dashboard for prediction visualization and feature importance analysis.

Employee Attrition Prediction | *Python, Scikit-learn, XGBoost, Streamlit*

- Developed a machine learning model to predict employee attrition using HR analytics data.
- Applied preprocessing, feature encoding and model optimization techniques.
- Evaluated models using Accuracy, Precision, Recall, F1-score and ROC-AUC.
- Built a Streamlit application for real-time employee attrition prediction.

Hybrid ResNet50 + CatBoost Crowd Counting | *TensorFlow, ResNet50, CatBoost*

- Developed a hybrid crowd counting framework using transfer learning and CatBoost regression.
- Extracted visual embeddings using ResNet50 and evaluated performance using MAE and MSE.
- Compared regression-based crowd estimation with density-map and object detection approaches.

AI-Powered Financial Fraud Detector | *Python, Aptos Blockchain, Machine Learning*

- Developed a blockchain-enabled fraud reporting system integrated with machine learning.
- Stored fraud reports on-chain using Aptos smart contracts.
- Designed a backend pipeline for fraud prediction and real-time alert generation.

ACHIEVEMENTS

- Member of Fraternity of Computer Science and Information Technology(FCIT) at HBTU Kanpur.
- Built multiple end-to-end Machine Learning applications using Python and Streamlit.
- Active problem solver on LeetCode, 2 star at CodeChef and 1100 rating in Codeforces.
- Currently learning FastAPI and advanced Machine Learning concepts.

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL

Machine Learning: Scikit-learn, TensorFlow, Keras, XGBoost, CatBoost, Regression, Classification, Feature Engineering, Model Evaluation

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis (EDA), Data Cleaning

Deployment: Streamlit, FastAPI (Learning)

Developer Tools: Git, GitHub, Linux, VS Code, Jupyter Notebook, Google Colab
